

## Most pharmaceutical companies can save money by a focused and effective testing strategy

According to EU legislation an environmental risk assessment must accompany an application for marketing authorization of medicinal products.

DHI has been involved in investigation of fate and effect from the early beginning of the Commission's development of the EMEA (The European Medicine Agency) guidelines for environmental risk assessment and has the necessary expertise to carry out an effective testing strategy.

DHI has practical experience in ecotoxicological studies of 'difficult substances' and setting of the optimal testing strategy for saving of costs.

DHI offers assistance in all phases of the risk assessment, including carrying out the required tests in compliance with the OECD principles of GLP (Good Laboratory Practice) and preparation of the environmental risk assessment report based on the study results.
